Each week, each group is required to present their project. Show your tutor:

· What (you are delivering);
· When (you will be delivering);
· Why (you have recommended the artefacts you are delivering);
· How much (time you plan to spend on your project and time you have spent on your project. What is the gap and what are you doing about it)

Presentation Properties
Use models rather than words.

Your tutors are looking for the 'big picture' that describes your project. Be prepared to answer with detail at question time.

This week's specials

Data Quality, MySQL & KNIME Integration

1. Dataset Overview & Decision Questions
- Confirm the data source, attributes, number of records, target or clustering features, and at least three decision questions.

2. Initial Data Quality Assessment
- Quantify missing values, duplicates, invalid or inconsistent values, and relevant outliers.
- Show a before-cleaning versus after-cleaning comparison; explain which records or values were retained, corrected, or removed.

3. MySQL Database Setup & SQL Exploration
- Demo import into MySQL, table structures and keys.
- Show SELECT, WHERE, GROUP BY, JOIN (where appropriate), and basic KPI queries.

4. KNIME Data Preparation Workflow
- Demo a live MySQL connection in KNIME and reproducible preprocessing, transformations, and EDA.
- Show cleaned data or analysis outputs written back to MySQL.

5. Initial Findings & Paper Progress
- Show early business insights and draft the Dataset / Data Quality / Methodology sections.

6. Updated WBS and Week 3 Plan
- Compare actual versus planned work and explain risks or delays.

Goal of Week 2:

A working MySQL–KNIME connection, documented data-quality assessment, reproducible cleaning workflow, initial KPIs, and a prepared dataset for modelling.
